

## Midterm Project Meeting Minutes

July 2:

- Meet as a team for the first time. Roque and Porter were original team members but Nate joined since he had missed class for a while due to sickness and didn't have a team.
- Went over the requirements for the project.
- Brainstormed ideas for how to write the program in a way that fulfills all requirements. (See Midterm Project Documentation file for more details on ideas)
- Assignments:
  - Porter: Begin skeleton of program (specifically the class to display the data)
  - Nate: Look into BitBucket to see if it is worth the time to learn and implement it for the project.
  - Roque: Continue brainstorming ideas for the program.

July 9:

- Meet at 5:30 (Nate arrived late due to work)
- Work on Porter's skeleton and start to fill in the program.
- Porter was the primary programmer, while Nate and Roque looked up syntax and gave ideas for ways to write the code.
- Decided to not use BitBucket because it would take quite a bit of time to get set up and learn to use.
- Assignments:
  - Porter: Work on enumerations
  - Nate: Look into interfaces
  - Roque: Work on inheritance

July 11:

- Meet at 5:30 (Nate was late again due to work)
- Finished basic functionality throughout program
- Assignments:
  - Porter: Work on Testing and look into implementing generics.
  - Nate: Create user manual of software and work on general documentation
  - Roque: Create try-catches throughout the software. Add more comments.

July 16:

- Meet at 5:30
- Finish try-catches.
- Add test files.
- Finish comments.
- Take screenshots for user manual

- Finish documentation
